templates and shapes and modify them with the program Enhanced 2D and 3D Features Layers make it easy to edit a drawing at various levels. They are used to hide or show features on a 2D or 3D drawing at different levels. Layers provide a “slicing” effect similar to multiple screens used in movie production. Layers improve the viewing and editing of a drawing in that it can be seen in layers, which can be named. Each named layer contains a copy of the data from the drawing, which makes it easy to

manipulate. Layers can be made public or private, allowing users to share with others only the parts they want to. Private layers can be hidden or hidden by default. It's easy to work on multiple layers at the same time. It's possible to hide one layer, set up a system with several layers, and then make it easy to display or change all the layers simultaneously. Layers can be combined, which means that the layer is used for display only, and is not a separate working area. Layers can be sized. Layers can be copied,

which means that a layer from a drawing can be used elsewhere in a drawing. It's possible to compare layers to make sure they are the same. You can make layers public or private. Layers can be synchronized. You can use layers to edit a drawing on a desktop computer or mobile device. Changes that you make are automatically synced. Layers can be removed. A drawing can have
